

One-Pair Testers for Cross-Connect Terminals

Key Features

- Identical to original tester for easy replacement
- Pocket tester contains ring terminals to allow easy connection to handset; is quicker and easier than attaching handset to talk block at disk on door

Description

Our one-pair testers allow electrical access to an individual pair in a 25-pair BT, 50-pair CQF, or RLS blocks used in any of the interface terminals manufactured by Emerson. The testers with leads can replace those in the cross-connect terminal, and the pocket tester is convenient for craftspeople to carry.

P62632
One-Pair BT Pocket Tester

P62633
One-Pair CQF Pocket Tester

RLSTEST1
RLS Block One-Pair Tester
